

Installation Instructions AR MOD-II RING Damper HF Vibration System

Step (1A)

The bolt heads should always face the installer. Attach lower clamp assembly at the specified distance provided by RCA from the end of guy anchor assembly with damper unit under guy cable. Tighten bolt until lock washer becomes flat under lock nut; tighten one more half turn.

Step (1B)

Attach upper clamp assembly of damper unit under guy cable further towards the tower. Tighten bolt until lock washer becomes flat under lock nut, and tighten one more half turn. Bolt heads should be 15 inches apart.

Quantity of 2 or more Damper units per guy cable (Page 2):

Step (2A)

The bolt heads should always face the installer. Attach lower clamp assembly of Damper Unit #2 a distance of 8 inches from upper clamp assembly of Damper Unit # 1.

Step (2B)

Attach upper clamp assembly of damper unit under guy cable further towards the tower. Tighten bolt until lock washer becomes flat under lock nut, and tighten one more half turn. Bolt heads should be 15 inches apart.

Multi-Damper Installation
